Is there a feature in the Azden 7000 that will automatically
pick if the offset is 600 up OR 600 down, depending on which
part of the band you are in???? I have not located it in the
manual, but sure would like to see it or know about it.

Ah yes...the R1. The radio you love to hate. I've had one in daily use for about a year now. Bought it used for \$165 from some chap who thought that the worn out numbers on the keypad would hamper my enjoyment, and thus he set the price accordingly. The only thing (IMHO) it has going for it is the size and the tuning knob. Otherwise it rather sucks as a receiver. Of course, I do pick up foreign broadcasts in the SW band with just the stock duckie when conditions are ok... a nice plus over the typical scanner. My friend, also an R1 owner, just sold his out of frustration in favor of a PRO-43. I am so tempted to do the same, but I just can't imagine parting with mine. Guess I have a soft spot for the underdog.

I am looking to purchase the following Hallicrafters equipment:

HA-20 VFO
SX-117 Receiver
SR-400/A Transceiver

Willing to buy non-working units in repairable condition.

Please email me if you have any of these items for sale, or know where they can be purchased.

Thanks,
--Rich
